

ALR is a Northern California based agency representing lighting and controls manufacturers. ALR was founded on the simple premise of providing the best possible customer service while operating with the utmost integrity. This has been the core philosophy of ALR for over 50 years and remains the cornerstone principle of our employee-owned culture.

At ALR we love our employees-owners, and we love our customers! We have several departments that work in small teams yet collaborate with one another to get the job done. And the job is... selling lights; and we sell a lot of them! To do that, we have an exceptional team of sales folks, lighting application designers, controls & quotations people along with project management personnel.

We are looking for someone to join our Controls team in our Oakland, CA office. Here, you are responsible for managing, designing, or quoting projects. Daily you will work with salespeople, contractors, distributors, and our factories. To accomplish this, you'll need an understanding of Bluebeam along with the usual Microsoft Suite of products. In addition, experience reviewing electrical drawings, understanding of circuitry, control protocols and controls sequences of operations is desirable. AutoCAD and AGI32 Analysis Software experience would be even more helpful but are not required. However, the other usual stuff like great customer service, excellent problem-solving skills, good communication, and detail oriented are required.

We have a long history of success, and we think we are a darn good team. As a result, we offer competitive compensation along with great medical coverage. Of course, paid vacation and national holidays are included. We also add in dental, vision, life and long-term disability plans for our folks and remember, we are employee owned. Our retirement plan (ESOP) has been a great success because of our culture, our leadership and our team member's hard work.

If this resonates with you, please let us know, we would love to chat.
